- Offer innovative, customized and value-added services to Customers.
- Be an ethical, transparent and responsible Global Organization.
- Become a process-driven organization

INFRASTRUCTURE

FABRIC STORAGE

Textile materials need to be properly cared and stored as they are exposed to heat, cold, humidity, fungus and insects. Different parts of the world have different climatic conditions. Hence, it is important to know the basic guidelines of how and where to store the textile materials. Proper packing and storing of the material will elongate its life and protect it from deterioration.

FABRIC CHECKING

We source only the best raw materials and rope in extremely talented individuals and deploy sophisticated as well as modern machines across all departments. Our agile infrastructure has enabled us to offer flexibility, shorter lead time and processing orders of any quantity to our customers.

FABRIC CUTTING

Cutting being the first operation of garment manufacturing lays the foundation of quality of the garment to be made. Any imperfection in cutting process can result in non-conformance of the quality standards of all further processes. To segregate fabric components from the spread of lay according to the marker's dimension. To create the clothing with the necessary pattern and shape. To get the clothing pieces ready for the next step in the manufacturing process.

ORGANIC FABRIC CUTTING

Fabric cutting is the first phase in the garment production process; it is the process of breaking a spread into garment sections that are the exact size and shape of the pattern pieces on a marker (by sectioning, bending, and cutting).

SORTING CUT PANELS

When the fabrics are received from the dyeing and finishing section, it needs to be checked, because, faulty fabrics can be supplied from dyeing and finishing. But the cutting section has to check it. Otherwise the end products will be faulty. For this, the fabric is being inspected by the quality inspector of the cutting section. They check the fabric fully and find out the faults. Then mark it so that, these faulty portion of the fabric can be rejected during spreading and cutting. Then the fabric is being stored for relaxation.

STICKERING CUT PANELS

We source only the best raw materials and rope in extremely talented individuals and deploy sophisticated as well as modern machines across all departments. Our agile infrastructure has enabled us to offer flexibility, shorter lead time and processing orders of any quantity to our customers.

RIB CUTTING

Ribs are one kind of knits fabric. Fabric ribs are normally attached to necks, sleeve hems, and bottom hem for binding. Maintaining an equal width of the rib is very important to produce the quality garment. This machine is also called as a piping cutting machine. Ribs are one kind of knits fabric. Fabric ribs are normally attached to necks, sleeve hems, and bottom hem for binding. Maintaining an equal width of the rib is very important to produce the quality garment. This machine is also called as a piping cutting machine.

STITCHING

In the textile arts, a stitch is a single turn or loop of thread, or yarn. Stitches are the fundamental elements of sewing, knitting, embroidery, crochet, and needle lace-making, whether by hand or machine. A variety of stitches, each with one or more names, are used for specific purposes. A stitch is a Loops or loops of one or more threads when bound with each other, either by interlacing, interlocking or intra-looping or combination of those when sewing fabric and each unit of such configuration is considered as a stitch. In this article, we will share details of different types of stitch used in garments sewing.

INFRASTRUCTURE

PRINTING

Printing is a process of decorating textile fabrics by application of pigments, dyes, or other related materials in the form of patterns. Although apparently developed from the hand painting of fabrics, such methods are also of great antiquity. Textile printing has become highly sophisticated and has involved the skills of many artists and designers.

CHECKING

Clothing manufacturer has a specific standard of checking to properly ensure the garment quality. This process is done to minimize the percentage of garments rejected by customers. During the step of checking, workers can spot any stans, cosmetic flaws or spots on the garments due to the cutting and sewing process. Textile quality refers to the sum of various properties of textiles that meet the needs of people for use or further processing. Textiles have many properties, but only the properties which related to use constitute their quality.

IRONING

Pressing or ironing is the most important finishing process in the readymade garments sector which is done by subjecting a cloth to heat and pressure with or without steam to remove unwanted creases and to impart a flat appearance to the garments. To complete sewing easily and beautifully, it must require to give minimum ironing to some parts of garments before sewing is called under pressing. Especially under pressing is done to most of the apparel industries for making a coat, jacket, and trousers and so on. For example, where there is needed for doing a crease effect to the parts of garments done by pressing before sewing.

METAL DEDUCTION

In the garment and apparel industry, metal detecting devices are utilised to detect needles that may have been accidentally lodged in finished garments. It is also necessary to ensure that garments and apparels meant to be sold or exported are devoid of all sort of metal contaminants. In the garment and apparel industry, metal detecting devices are utilised to detect needles that may have been accidentally lodged in finished garments. It is also necessary to ensure that garments and apparels meant to be sold or exported are devoid of all sort of metal contaminants. Metal Detectors are metal sensitive, hence, they immediately detect whenever a metal substance whether ferrous, non-ferrous or stainless steel comes in their proximity.

TAGGING & LABEL ATTACH

Labels communicate to the customer what types of materials have been used in making the garment. They communicate how to care for the garment and other special instructions about it. They communicate the size of the garment. They communicate the name of the manufacturer. Not only does a label establish your clothing and brand identity, but it also gives instructions that help the customer best care for the garment long after purchase.

PACKING

All the products are coming out from packing is 100% passing through metal detector to avoid any metal/sharp tools for the entire customer safety. Our Customised and also standard packing methods are used to ensure safe transit of the product till the retail sales at customer end. All the standards and international norms are all periodically monitored by our quality team for consistent quality.

ACCESSORIES & STORE

Most important in all aspects of a business. Consumers need and expect value for money. As garment manufacturers, we should always strive for good work.

"Systems are needed to program and coordinate the efforts of different groups in an organization to maintain optimal quality." Because quality control is considered representative of quality assurance or full quality control.

LOGISTIC

Clothes are transported across the globe using any and all of the major shipping methods - sea, road, rail and air. The most common of these worldwide is ocean freight, as upwards of 90% of clothing spends at least a portion of its journey on a ship.

QUALITY POLICY

We follow stringent quality processes as part of our commitment to offer the best to our clients. To achieve this consistently and to maintain our high-quality standards in men's shirts manufacturing, we begin with the education and training of our employees and suppliers. They are made aware that their work significantly influences the performance of all of our products. The process of continuous improvement includes providing them with knowledge of the products as well as internal processes and services.

Measures such as compliance with the European Environment Policy; the REACH standards, in-process quality audits, and testing are utilised throughout the production process with the aim of achieving zero defects and an environmentally friendly manufacturing process. The quality system in place - AQL (Accepted Quality Level) 1.5, is designed to identify problems and measure the performance of the products during internal processes, while corrective actions focus on the prediction, prevention and elimination of defects and errors.

All suppliers we work with are expected to be similarly certified and to use preventive techniques to meet these requirements continuously.

These are the quality objectives that drive us :

- All products produced shall meet our customer requirements.
- We will provide sufficient training for all our employees about product knowledge, safety, social and critical control paths.
- We will ensure that all our products meet legal and social requirements including the European Environment Policy.
- We will ensure our products meet quality and delivery requirements of our customers by providing the best service throughout the year.
- We will ensure a safe working environment for all our employees.
